

## Gradle program to calculate area of circle and square

```
task circle {
    doLast {
        double area =
(22/7)*Double.parseDouble(radius)*Double.parseDouble(radius)
        println 'area of circle is = '+area
    }
}
task square {
    doLast {
        double area = Double.parseDouble(side)*Double.parseDouble(side)
        println 'area of circle is = '+area
    }
}
```
